Experiment No:3.a
Conduct an experiment to show data visualization Using line plot

AIM:

To Conduct an experiment to show data visualization using line plot

DESCRIPTION:

Take any sample data either through csv file or data fetched directly through Code.

CODE:

```
import matplotlib.pyplot as cricket
Overs = list(range(5, 51, 5))
Australia_Score = [35, 68, 105, 145, 180, 215, 250, 285,
325, 365]
England_Score = [28, 62, 98, 130, 160, 195, 225, 255, 290,
330]
cricket.plot(Overs, Australia_Score)
cricket.plot(Overs, England_Score)

cricket.title("AUSTRALIA Vs ENGLAND")
cricket.xlabel("Overs")
cricket.ylabel("Score")

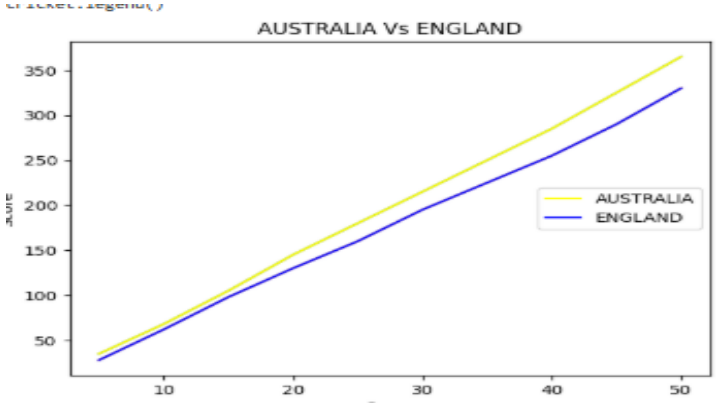

cricket.legend()

cricket.plot(Overs, Australia_Score, color="yellow",
label="AUSTRALIA")
cricket.plot(Overs, England_Score, color="blue",
label="ENGLAND")
```

```
cricket.legend(loc="center right")

cricket.show()
```

OUTPUT:

RESULT:

The data visualization of cricket match for Australia and England was successfully performed using line plot.

.

Experiment No:3.b
Conduct an experiment to show data visualization using Bar chart

AIM:

To Conduct an experiment to show data visualization using bar chart

DESCRIPTION:

Take any sample data either through csv file or data fetched directly through Code.

CODE:

```
import matplotlib.pyplot as hscmark
import numpy as np

Names = ['ARUN', 'RAHUL', 'MEENA', 'DIVYA', 'KARTHIK',
'ANU']

xaxis = np.arange(len(Names))

Percentage_hsc = [88, 95, 82, 91, 67, 78]

hscmark.bar(Names, Percentage_hsc)

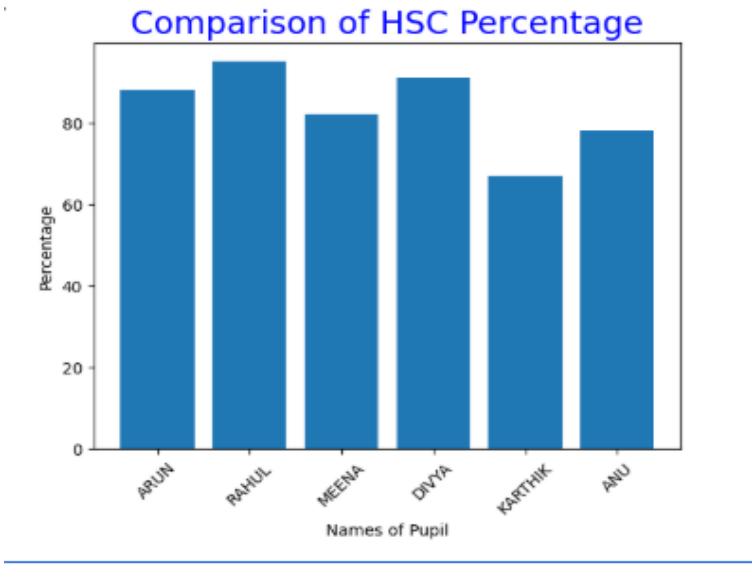

hscmark.xticks(xaxis, Names, rotation=45)

hscmark.xlabel("Names of Pupil")
hscmark.ylabel("Percentage")

hscmark.title("Comparison of HSC Percentage",
fontsize=20, color="blue")
```

```
hscmark.show()
```

OUTPUT:

RESULT:

The data visualization of hscmark was successfully performed using a barchart . the name of different student were represented clearly using bars

Experiment No:3.c
Conduct an experiment to show data visualization using pie chart

AIM:

To Conduct an experiment to show data visualization using pie chart

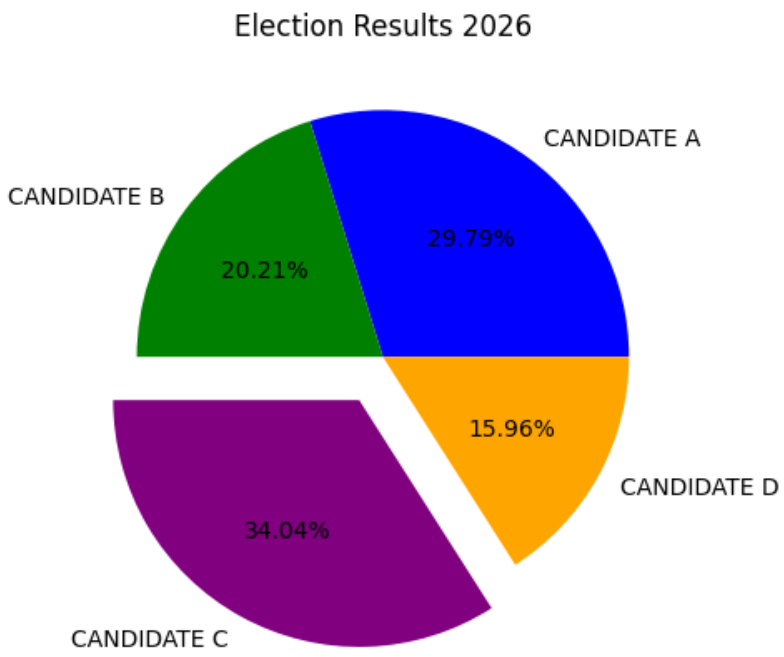

.DESCRIPTION:

Take any sample data either through csv file or data fetched directly through code.

CODE:

```
import matplotlib.pyplot as election
# Election data
labels = ['CANDIDATE A', 'CANDIDATE B', 'CANDIDATE C',
'CANDIDATE D']
Votes = [280, 190, 320, 150]
colors = ['blue', 'green', 'purple', 'orange']
explode = (0, 0, 0.2, 0)
# Plotting the pie chart
election.pie(Votes, labels=labels, colors=colors,
             explode=explode, autopct='%0.2f%%')
election.title('Election Results 2026')
election.show()
```

OUTPUT:

RESULT:

The data visualization of election result was successfully performed using pie chart.
